

# Theory of Change

A guide to developing a Theory of Change

01

Purpose of the Theory of Change

# 1.1 Start with your "Why?"

Before counting numbers, ask "What change do we truly want to see?"

- Short-term funding → Tracks activities ("What we did")
- Long-term impact 
   — Requires
   clarity on why it matters" and "how
   change happens."

# 1.2 Purpose of the Theory of Change

A Theory of Change maps the journey from activities to outcomes to the change you want to effect.

It is the critical foundation for measuring and evaluating impact, enabling your organization to assess its effectiveness from both an organizational and program level.

# **Clarify Goals**

To help your organization define and articulate the longterm goals and desired outcomes of their work

### **Engage Stakeholders**

To involve key stakeholders in the discussion over desired goals and outcomes of the intervention, fostering collaboration and ensuring that different perpectives are considered.

#### **Build Consensus**

To create alignment and buy-in among team members and stakeholders regarding the approach and expected outcomes

## **Encourage Reflection**

To provide a space for reflection on past experiences, challenges, and successes, and to inform future strategies.

# O2 Overview of a Theory of Change

## 2.1 Overview of Theory of Change

### **Visual Representation**

Illustrates how activities lead to desired socio-economic changes

# Simplexity

Distilling complex outcomes into simple terms through team discussions to prioritize outcomes and impacts.

#### **Backward Iteration**

Separates interrelated outcomes, identifying causeeffect sequences.

#### **Stage Discussion**

Essential for defining causal mechanisms at organizational, individual, or systemic levels.

#### Focus on Impact

Emphasizes effects from beneficiaries' or stakeholders' perspectives, excluding operational details.

# 2.2 Six steps for building a good Theory of Change

# 1. Define the Problem

Clarify the problem you aim to address; why your intervention is required, thinking about the wider context, pressures and support for beneficiaries

# 2. Set our your Goal(s)

Identify the higher level changes you are seeking to achieve. Think about whether there are factors outside your control that will affect these goals.

# 3. Map intended outcomes

Carry out backwards mapping to identify intermediate and immediate outcomes necessary to achieve these goals

# 4. Identify target audience(s)

Identify who must be involved, reached, targeted and/or participants to achieve these outcomes

# 5. Identifying activities

Identify the activities necessary to achieve these outcomes

# 6. Examine your assumptions

Consider what needs
to happen or be in
place for the
intervention to work.
Are you taking
anything for granted?

# O S Key Definitions

### 3.1 Key definitions & examples

**Inputs** Things you need to make the organization work

(resources)

Eg. Funding, staff, volunteers

**Activities** The work you are going to undertake / the

programs (that help communicate to the world

what it is that you're going to do.)

Eg. Teacher training, community events

**Outputs** Unit counts of the volume of work that you'll

actually get done (tangible, immediate and

countable measures of work).

Eg. No of schools, no. of participants, no. of

events.

Outcomes How the outputs translate into changes in the

real world (how the world looks different as a

result of the work you're doing).

They can be short, medium, or long-term

E.g. Increased knowledge of the arts, enhanced

confidence, improved language proficiency

**Impacts** Why your organization matters, why what you're

doing has made an impact on the world.

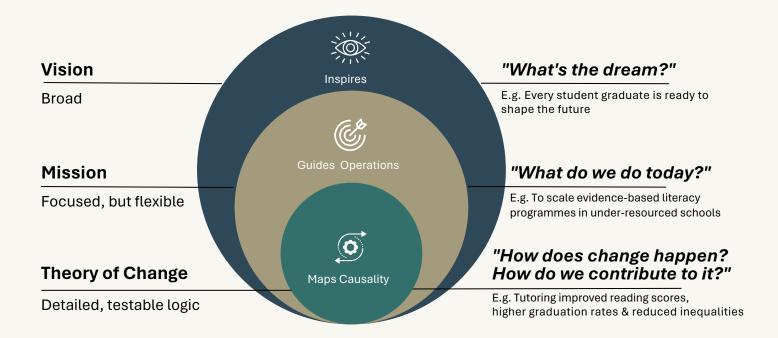

E.g. To increase life skills, through the arts, for

diverse groups in Hong Kong by 50%

# 3.2 Distinctions between Vision, Mission & Theory of Change

Many wonder how these three similar yet distinct concepts differ, so we've broken it down for you:

#### **About PIA**

**Driving Impact Culture for Sustainable Prosperity** 

Purpose Impact Action is a boutique consultancy dedicated to supporting mission-driven organizations, to assess the impact of their interventions. Grounded in both quantitative and qualitative research, we provide evaluations, research tools and impact measurement frameworks.

We also co-create theories of change, run capacity building workshops and advise on communications strategies, all focused on measuring and maximizing an organization's impact.

#### Get in touch!

We'd love to learn more about your needs and help you on your impact journey.
